EDUCATION

TRURO COLLEGE
BSc Applied Computing Technologies, 1st Class
2019

UNIVERSITY OF EXETER
BSc Physics with Astrophysics, 3rd Class
2015

WORK EXPERIENCE

FRONT END DEVELOPER, VANELLUS TECHNOLOGIES LTD

(February 2024 – April 2024)
A short-term placement with a technology start-up focused on improving computational fluid dynamics software using machine learning. My role was to help them build the basics of a functioning web application to help users configure, run, and analyse fluid simulations on dedicated servers – all contained within a clean UI which conforms to modern development standards and practices.

FRONT END DEVELOPER, ROUTENOTE LTD

(August 2019 – February 2024)
I initially worked as one of many developers, but became the sole in-house developer in July 2021. Below are the projects I worked on during my employment:

BROCHURE SITE
Updated RouteNote's brochure to a modern, responsive site with content ranging from simple text to bespoke animations & dynamic tables across dozens of pages.
Also localised the new brochure for a Korean audience, with help, text translations, and advice from RouteNote's branch in Seoul – with unique tweaks to its styles to accommodate the change in language.
As of 2023 site gets ~1 million views per month.

USER PORTAL
With the pages of a new User Portal being built by an out-of-house team in India, I was tasked with creating a functioning component library for them to build pages from. Components varied from buttons & links through form fields & menus up to containing frames – all built to receive and transmit information needed by the India team.

OTHER CONTRIBUTIONS
Blogs (Edited Wordpress themes to match branding.)
PUSH.FM (tweaked brochure page, dashboard & components)
User Portal v1 (a few individual pages)
RouteNote App (proof-of-concept for home page)
